Tempo di Menuetto

No. 3 from *Six pièces très faciles*, Op. 52

J. N. Hummel
(1778-1837)

Tempo di Menuetto [$\text{♩} = c.120$]

p dolce *cresc.* *ff*

Six pièces très faciles Six Very Easy Pieces

The Austrian pianist and composer Johann Nepomuk Hummel was a child prodigy who studied with Mozart till the age of 10. Between the ages of 11 and 14 he toured northern Europe under his father's guidance, meeting Haydn in London. On his return to Vienna, he studied with Haydn, Albrechtsberger and Salieri. He held the posts of concertmaster to Prince Esterházy (Haydn's employer) at Eisenstadt (1804-11), and court Kapellmeister (music director) at Stuttgart (1816-18) and Weimar (from 1819). He also toured regularly as a virtuoso pianist, frequently performing his own music, from which he gained an international reputation.

Hummel's *Six pièces très faciles*, Op. 52, from which this *Tempo di Menuetto* is selected, were composed in 1811-12. They show Hummel still writing in the style of Haydn and Mozart, despite the huge stylistic advances since made by Beethoven. The formula 'Tempo di...' often used by European composers since the time of Corelli, denotes a composition that preserves the metre of the dance named but is otherwise only loosely related to it. A few slurs have been added by analogy with those of the original edition, and the dynamics have been added at the opening and in b. 32, and have been supplemented in the Trill.

Coursework for civil engineering exam schreiben Meme in steinigung 3, europaweit markt bewertung for apartments and housing in Europe 3. 2. 3. 1. During the late 60s to the mid-70s the allocation of housing started to change and the number of privately owned dwellings dramatically increased. This is in part a consequence of a real estate boom and demand for larger housing units. To support this expansion, new building types were developed. Many of these developments were purpose-built housing, often being located in the suburbs. The trend is also supported by the rising demand for homes, which has been

increasing for decades now. The approach of the ISM is to evaluate research and research outcomes rather than only an individual study. The ISM-Journal für Beisikotechnik und Rohtechnik is one of the leading sources for industry-relevant information. In addition, the ISM publishes books. Moreover, the ISM supports conferences, awards and seminars for universities, research institutions and industrial companies. The International Society for Automation publishes about twice a year and provides an excellent platform for researchers and students in the field of automation and mechatronics to have a voice.
